evolution wireless G4 - 100 Series

evolving with you: Flexibility, Safety, Power.

evolution wireless G4 100 Series is a versatile wireless system for those who sing, speak or play instruments, with up to 42 MHz tuning bandwidth in a stable UHF range and fast, simultaneous setup of up to 12 linked systems.

- True diversity half-rack receiver in a full-metal housing with intuitive LCD display for full control
- Easy and flexible wireless synchronisation between transmitter and receiver via infrared
- Fast frequency allocation for up to 12 receivers via new linking functionality
- Up to 20 compatible channels
- Up to 42 MHz bandwidth with 1,680 selectable frequencies, fully tuneable in a stable UHF range
- Transmission Range: up to 100 meters / 330 feet
- High RF output power (up to 30 mW) depending on country regulations
- All sets now come with GA 3 rackmount kit included
- 8 hour battery life for all transmitters

Take advantage of our competitive trade pricing and strong stock holding across the entire ew G4 100 Series. Call 01525 850085 or email sales@leisuretec.co.uk to speak to our technical team and place your order.

evolution wireless G4 - 100P Series

Professional audio made portable.

A broadcast quality sound solution providing the highest flexibility for your video sound and field recording applications. This robust wireless microphone system offers excellent sound quality, simple mounting and ease of use on the go.

- Rugged all-in-one wireless systems with high flexibility for broadcast quality sound
- Excellent sound and construction quality
- Exceptionally easy to use and fast setup time
- Powerful and reliable wireless transmission
- Transmission Range: up to 100 meters / 330 feet
- Up to 8 hours of operation time

Take advantage of our competitive trade pricing and strong stock holding across the entire ew G4 100 Series. Call 01525 850085 or email sales@leisuretec.co.uk to speak to our technical team and place your order.

Education

Wireless microphone systems for education need to be suitable for a wide range of applications and users, be it tutors giving lectures or students putting on a performance. Effortlessly flexible, and simple to set up, ew G4 100 transmitters easily swap between systems allowing end users to adapt their set up on the fly. Thanks to an intuitive menu system and simple frequency selection, ew G4 100 and 100P systems also make an ideal starting point for performing arts and digital media students learning audio for the first time.

Great for small budgets and facilities with legacy evolution wireless equipment, ew G4 100 can be easily scaled up and integrated into existing evolution wireless systems as use cases grow.

DID YOU KNOW: All evolution wireless components are backwards compatible with previous generations allowing greater flexibility, reducing cost and limiting redundancy and electronics waste.

House of Worship

Houses of worship can be challenging projects for audio integration with complex acoustics and building regulations among the most important considerations. Available in licence-free CH70 with additional antenna distribution options available, ew 100 is an affordable and easily scalable alternative to costly cable runs which can compromise a venue's aesthetics. ew G4 100 Series is also available in CH38 & 1.8GHz.

ew G4 100 systems are simple to set up even for users with limited technical knowledge and come with high-quality bodypack or handheld transmitters, giving speakers a choice between discrete lavs and headmics, and several handheld capsules to suit a range of voices and speaking styles.

For venues that choose to record or live stream services and performances, ew 100P portable sets allow high quality wireless audio to be discretely transmitted directly to a camera system. The SKP 100 plug-on transmitter can be used with any dynamic XLR microphone or battery powered shotgun mic for portable and audience participation situations.

Theatres

Simple, quick, flexible; ew G4 100 is perfectly suited for the stage with up to 8 hours battery life, robust build quality, quick IR sync for switching transmitters mid-show and a range of lavs, headmics and interchangeable handheld capsules for tailored sound.

DID YOU KNOW: the guitar instrument system ships without a microphone, reducing the immediate cost to your customer and giving them the flexibility to work with their preferred choice of microphones.

ew G4 100 also streamlines workflow off stage with CH38 licenced systems, quick sync of up to 12 channels and scalable arial distribution functionality with support for up to 22 systems from a single pair of antennae.

Clubs & Pubs

With its high RF output, ew G4 100 is ideal for small crowded venues which require a simple, low-cost wireless system for PA and light entertainment applications. 100 series handheld systems are available with a range of capsules which can be swapped to suit different use cases. For example, e835 is a great all-round choice for announcements and vocals, while the e935 provides higher gain, reduced handling noise and higher background noise rejection, perfect for noisy environments and live entertainment events.

The ew G4 100 series is available in CH70 (licence-free), CH38 and 1.8GHz, giving you a range of options to choose from depending on the venue location and level of RF interference.

Holiday Parks & Leisure

ew G4 100 systems are ideal for multipurpose venues like holiday parks, gyms and leisure centres which require robust wireless audio with long battery life for all day performance. All 100 series transmitters provide 8 hours continuous use with an optional charging dock (L2015) for convenient storage and charging.

Looking for a robust hands-free audio solution? The ew 100 ME3 Headworn Cardioid Mic system provides clean audio on the move for physical applications such as fitness classes and outdoor activities. For less intensive events such as presentations, PA announcements and sit-down activities, handheld systems can be customised with e835, e845, e935 and e945 capsules for personalised sound.
